

Current Flow Updated on Jul 20, 2016

- **Create Taxonomy**

Taxonomy Management

 - Drag 'n Drop UI is buggy & unstable
 - UI is not intuitive
- **Upload Media**

Media Uploader

 - Drag 'n Drop files UI is unstable
 - Unnecessary steps for inserting a new image
 - Hard to add texts above/after the image (need to click on a tiny red arrow)

Media Library

 - Messy (Can't remove unwanted media)
 - No Search
 - Most recent uploaded assets are placed in the very bottom of the library
 - Can't reuse the same image
- **Edit Media**
 - No image resize support
 - Edit image size using external tools
 - Use Table to resize image
 - No Media editing once uploaded (particularly with videos, need to delete the original asset and re-upload)
- **Style & Formatting**

General

 - Need templates for common components (Example, Note, Table, etc.)

Font

 - Need a few more standard colors
 - Need a few more font styles

Table

 - Too much workaround to make it render properly
- **Enter Metadata**
 - Repetitive (Need a drop-down)
 - Not clear what's required (need labeling)
 - Page should auto-scroll to the 1st missing field after form validation
- **Preview**
 - WYSIWYG editor is not displaying the content close enough as how they are shown on the Learn flow.
 - Deliver Sequence (preview) leaves the current page
 - Need external tool to preview Latex
- **Add Assessment**
 - Add Assessment leaves the current page (Should be presented on the same page)
 - Add Assessment UI needs to be cleaned up
- **Enter Answers**
 - No easy way to paste all at once
- **Edit Sequence**
 - No alternative way other than Drag 'n Drop to arrange order. It's not easy to drag/drop with elements are so tall
